The clonal dwarf **rootstock** VVA-1 was developed at the **Krymsk** breeding station of VIR (**Krasnodar** region, **S. Russia**) as a hybrid of **Prunus** tomentosa and P. divaricata. This **rootstock** has been used for various stone fruits, viz. the cherry plum cultivar Kubanskaya Kometa, (Kuban Comet), the plum cultivar Vengerka Kavkazskaya (Caucasian Hungarian), and the peach cultivar Maiskii Tsvetok (May Flower). Data are presented on tree growth and fruit yields. Results show that VVA-1 is a universal clonal dwarf **rootstock** suitable for establishing intensive orchards of stone fruits at high planting density.

DESCRIPTORS: high density planting; plums; peaches; rootstocks; selection ; temperate fruits; fruit crops

IDENTIFIERS: **Prunus** tomentosa x **Prunus** divaricata

ORGANISM DESCRIPTORS: **Prunus** domestica; **Prunus** cerasifera ; **Prunus** ; **Prunus** persica

GEOGRAPHIC NAMES: **Russia**

BROADER TERMS: **Prunus** ; Rosaceae; Rosales; dicotyledons; angiosperms; Spermatophyta; plants; Developed Countries; Asia; Central Europe; Europe

CABICODES: Plant Production (FF100)

Document Type: Journal article

Virus-free material developed using shoot-tip culture and rapid clonal micropropagation was used to establish a nursery of superelite and normal (control) stocks comprising these forms: LTs52 (a cherry hybrid of the Cerasus-Padus type derived from the cross Tserapadus 1 x sour cherry Lyubskaya), a **rootstock** for sour and sweet cherry; VVA1 (a spontaneous hybrid between cherry **Prunus** tomentosa and myrobalan plum P. **cerasifera**), a dwarfing stock for apricot, **Prunus** **cerasifera** , plum and peach; and VSL2 (P. fruticosa x L2), a dwarfing stock for sour and sweet cherry. A comparison of the superelite and control (non-virus-free) stocks showed that the former had more rapid growth and gave a higher yield of green cuttings with better rooting ability and better plant development after rooting than the former. Data are tabulated on mean number of shoots per

plant, mean shoot length, number of cuttings per plant and per hectare, rooting percentage, number of first order roots, length of growth increment and diameter of the stem (in the clonal **rootstock**) in planting material of all 3 forms from the normal and superelite nursery.

DESCRIPTORS: interspecific hybridization; dwarfing; cherries; plums; peaches; apricots; rootstocks; cuttings; rooting capacity
ORGANISM DESCRIPTORS: **Prunus cerasus**; **Prunus tomentosa**; **Prunus cerasifera**; **Prunus fruticosa**; **Prunus**; **Prunus persica**;
GEOGRAPHIC NAMES: **Russia**

Kuban' 86 (or AP-1) was raised from a cross between myrobalan (**Prunus cerasifera**) and peach and is compatible with plum, peach and myrobalan cultivars in the **Krasnodar** district. It produces medium-sized productive trees with relatively good resistance to drought and diseases and can also be used as a frost and cytosporosis (Valsa) tolerant stembuilder. Kuban' 86 is propagated mainly by hardwood cuttings which produce a vigorous root system by the autumn. The plants are suitable for bench grafting, early (July) budding or planting in stock nurseries. Trees grew well on this **rootstock** and showed no breakage at the union.

DESCRIPTORS: Peaches; **rootstock** scion relationships; compatibility; Plums; stone fruits; rootstocks; characteristics; Frost; resistance; Drought; interspecific hybridization; temperate fruits; fruit crops
ORGANISM DESCRIPTORS: Valsa; **Prunus**; **Prunus cerasifera**; **Prunus persica**

In long-term trials peach trees on Palmirskogo peach rootstocks started

cropping in the 3rd year and had a life-span of 12-20 years. Those on cherry plum rootstocks did well on heavy soils and tolerated temporary soil moisture excess, but tree losses began at 10 years of age. Apricot was considered an unsuitable **rootstock** for peaches in the local **Krasnodar** conditions. A triple hybrid, viz. apricot X bessey cherry X cherry plum, showed great promise and gave 100% rooting, take and production of transplants.

DESCRIPTORS: hybrids; peaches; temperate fruits; fruit crops; plums

IDENTIFIERS: peach rootstocks; Palmirskogo peach; myrobalan; apricot x bessey cherry x cherry plum hybrid; triple; a **rootstock**
